

AHMEDABAD ENVIRONMENT ACTION PLAN

Generated by SatEye — Based on Real Satellite & Government Data

CLIMATE TREND

India has warmed **0.75°C** since 1901 based on 121 years of meteorological records. The warming trend is **0.0063°C per year**. Projected mean temperature by 2050: **25.9°C**.

Recommendation: Increase urban tree cover by 20% in high-temperature wards. Promote white rooftop painting scheme to reduce urban heat island effect.

AIR QUALITY

Ahmedabad PM2.5 level is **143.43 µg/m³** — **3x above the national safe limit of 60 µg/m³**. Isolation Forest ML model flagged Ahmedabad as an **anomaly** compared to all India cities in this dataset.

AIR QUALITY — WARNING

PM2.5 is 143.43 — above safe limit

Recommended Action: Increase green cover and restrict diesel vehicles

SOIL — NORMAL

Soil moisture within normal range

Recommended Action: Continue monitoring

Data Sources: IMD Temperature Records (1901–2021), CPCB Air Quality Index, ISRO SMAP Soil Moisture, Google Earth Engine Satellite Archive.
